

FAQs: You may be wondering...

I've tried other treatments and they didn't work. What's different about the Bella Contour?

The **Bella Contour** is an advanced technology, now approved and available in North America. It has been proven effective on over 92% of over 5000 clients treated since 2005. The measuring protocol allows you to quantify results after each treatment.

Are the results long lasting?

Yes. After a complete program of body contouring treatments, the circumference of the treated area will not increase if weight is kept stable. After a cellulite reduction treatment program, cellulite might reappear but it will take years for the body to accumulate it again.

Does the Bella Contour work on men?

Definitely. Even though men are not prone to develop cellulite, they might have loose skin, or some fat trapped under the skin. These problem areas can be improved by the treatments, as **Bella Contour** helps with skin tightening and fat reduction. Clinical experience has shown excellent results for problem areas such as "love handles", loose pectoral and breast tissue.

Can everyone receive the treatment?

Anyone who is healthy can benefit from the **Bella Contour**.

Do Bella Contour treatments hurt?

No. The treatment merely generates a warm sensation. Individuals report that they experience it as a warm massage. Some people even fall asleep during the treatment.

How long does a treatment session last?

Each body contouring treatment session lasts 50 minutes. This is comprised of 40 minutes of ultrasound and interferential therapy and 10 minutes of vacuum massage.

How many sessions does it take to see results?

Many people notice changes after the first session! The recommended treatment of 4 sessions will result in significant, noticeable reduction. Additional sessions will result in further reduction.

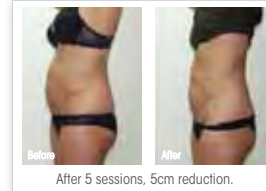

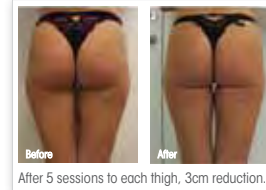

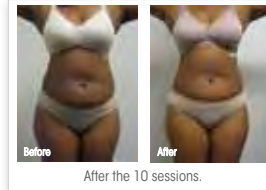

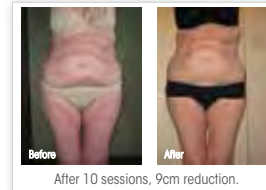

Is Bella Contour treatment a weight loss program?

No. To lose weight, one needs to follow an exercise and diet program in order to consume fewer calories than are burned. However better body contouring results are achieved by combining the treatments with a diet and exercise program.

Who performs the treatment?

A qualified BCD operator performs all treatments. All BCD operators are trained and certified by specialized trainers.

GET RESULTS

I play lots of sports but I found over the years that the inches were not disappearing like they used to. After my first treatment I was down **7cm!**

LOSE where you CHOOSE!

- > Lose stubborn inches & firm loose skin
- > Trim fat you haven't been able to lose with exercise
- > Smooth cellulite & improve skin texture

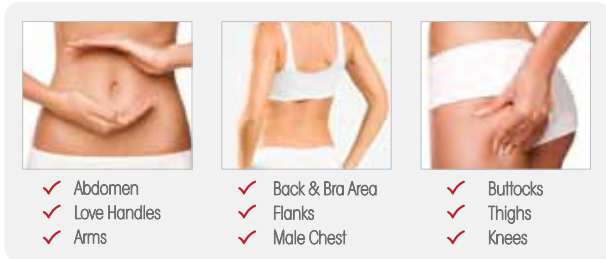

Introducing the **Bella Contour**, a safe, effective and noninvasive body contouring technology that **burns fat naturally** in those tough-to-trim areas...

LOSE where you choose!

Whether you have a little or a lot to lose, one thing none of us can do with exercise and diet is lose inches where we *want* to lose them.

With safe and painless **Bella Contour** body contouring treatments, you can target stubborn fat anywhere below the neck including the abdomen, love handles, thighs, buttocks and other common places. Plus you can effectively improve your skin texture and the appearance of cellulite!

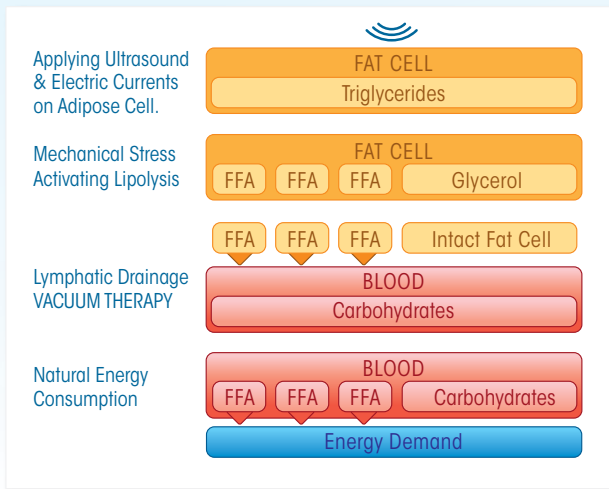

Thousands of **men & women** have already enjoyed the benefits:

- ✓ **Proven circumference reduction and results** – based on thousands of clients treated worldwide by the Bella Contour
- ✓ **Natural, safe, noninvasive treatment** – the first device that amplifies natural metabolism to shrink fat cells
- ✓ **Visible results with objective measurement system** – measurements & images are recorded and displayed via dedicated built-in software to easily follow progress
- ✓ **Long lasting body contouring** – no need for maintenance treatments after completion of the treatment course; just follow your consistent lifestyle. However, the more treatments you get, the more you will lose.

How does it work?

Using a unique combination of 3 technologies – resonant ultrasound, electric fields, and vacuum massage – the **Bella Contour** provides a proven, safe, and effective solution for targeted fat loss. The treatment stimulates the fat cell, releasing the fatty acids in to the blood stream where the body then uses them for energy. This is the same physiological process that takes place when you exercise, however, with the **Bella Contour**, you get to target which fat cells you want to use as energy, allowing you to choose where you lose inches.

A safe & comfortable treatment that gets results

The **Bella Contour** treatments are pain-free and are even described by many men and women as a comfortable massage.

The device is FDA and CE approved and has been proven to achieve a circumference reduction of **at least 4cm** in 92% of clients. Some clients have recorded losses of up to 6" in their desired area.

An independent study showed a **92% success rate.**
